

## **A/V Capabilities at Pique**

### **Speaker:**

We have one surround sound speaker that is near the fireplace. This speaker is good for when using the microphones or playing background music. It should NOT be used as your speaker for dancing. If you would like to play dance music, we recommend having at least some kind of outside speaker, whether it is from a DJ, or one you own or rent.

### **Microphone:**

We have one handheld wireless microphone and two clip-on lavaliers. We do not have a microphone stand. These microphones are good enough for a wedding ceremony, toasts or other speakers, but if you are having a DJ at your event it is best to use their equipment for the microphone as they can moderate the sound from their booth.

### **Music:**

We have an Amazon Fire tablet that is attached to our sound system in our back room. You are welcome to use this device to play background music by using our Pandora or Spotify accounts and just choosing a playlist, or logging into your account on there. You may also hook up your own device. If you have an Apple device, we do have a dongle adapter but you may wish to bring your own in case ours goes missing.

All music and sound is operated from a system in our back workroom. Catering may sometimes be using this space, so it is not always convenient to get to.

### **TV Behind the Bar:**

You are welcome to bring a flash drive of photos to plug into this TV in order to play a slideshow of them. Photos should be JPEGs and in the order you want them to play on the flash drive.

### **Projector/Screen:**

We do have a projector and screen, should you have the need to play a larger slideshow or presentation, with or without sound. The projector is in the ceiling and the screen comes down in front of the stall doors. You would need to provide a laptop for this, which would hook in via an HDMI cable connection in the office closest to the back door, and this is also where the audio jack hooks in. A PC works best with this system. If you have a Mac, the video should work but we may have trouble with the audio and might have to connect one of the microphones to the laptop. Other devices such as a Chromebook do not work with it. You are welcome to bring your own projector and use our screen.

We do not have a podium. We do have a music stand.
